heaviside-rpe-profitability-redacted-summary

Heaviside RPE / Profitability - Redacted Summary

This is a redacted evidence summary for `ops-coo-009`. It is designed to support the GM-role claim without attaching raw QuickBooks reports, customer lists, payroll records, bank data, or private P&L exports.

Why This Is The Primary GM Proof

Single Grain's GM posting centers on moving revenue per employee while maintaining business health. This artifact shows the same operating pattern inside Heaviside: revenue/FTE improved materially while net margin also improved or remained healthy.

This is stronger than a general "I use AI" claim because it ties systems work to the labor math the role is explicitly accountable for.

Source Records

Evidence	Source reference	Shareability
Quarterly revenue and net income	Native QuickBooks ProfitAndLoss snapshots synced into Agency Financials on 2026-05-13	Summarized only; raw P&L exports are confidential.
Labor-to-FTE conversion	QuickBooks labor accounts converted through current domestic/non-US cost-per-FTE benchmarks	Summarized method is shareable; raw payroll records are confidential.
Current paid-team benchmark	Current payroll allocation: `268.215` hours/week = `6.705` paid-team FTE `[Observed internal payroll records]`	Summarized only.
Working calculation	Internal `ops-coo-009` RPE calculation and SloaneVault RPE history note	Summarized only.

Method

Revenue and net income come from QuickBooks ProfitAndLoss snapshots. FTE is estimated from QuickBooks labor spend by separating domestic and non-US labor pools and converting those pools through current cost/FTE benchmarks.

The method is imperfect but directionally useful: it uses observed finance records and a stated FTE conversion method rather than headcount guesses or bank-deposit cash flow.

Year-Level Summary

Year / period	P&L revenue	Avg FTE-equivalent	Revenue/FTE read	Net income	Net margin
2022	`$589,535` `[Observed internal P&L]`	`15.80` `[Estimated FTE]`	`$37,306/FTE` `[Observed internal P&L / Estimated FTE]`	`$3,848` `[Observed internal P&L]`	`0.7%` `[Observed internal P&L]`
2023	`$812,398` `[Observed internal P&L]`	`14.61` `[Estimated FTE]`	`$55,606/FTE` `[Observed internal P&L / Estimated FTE]`	`$21,201` `[Observed internal P&L]`	`2.6%` `[Observed internal P&L]`
2024	`$783,177` `[Observed internal P&L]`	`10.15` `[Estimated FTE]`	`$77,198/FTE` `[Observed internal P&L / Estimated FTE]`	`$111,188` `[Observed internal P&L]`	`14.2%` `[Observed internal P&L]`
2025	`$632,867` `[Observed internal P&L]`	`7.03` `[Estimated FTE]`	`$90,024/FTE` `[Observed internal P&L / Estimated FTE]`	`$81,546` `[Observed internal P&L]`	`12.9%` `[Observed internal P&L]`
2026 Q1 annualized	`$185,710` quarterly `[Observed internal P&L]`	`6.27` `[Estimated FTE]`	`$120,094/FTE` `[Observed internal P&L / Estimated FTE]`	`$31,712` quarterly `[Observed internal P&L]`	`17.1%` `[Observed internal P&L]`

Strategic Read

The cleanest story starts in 2024, when AI/system-integration work began lining up with the operating model.

Period	Revenue/FTE	Net margin	Read
2023	`$55,606/FTE` `[Observed internal P&L / Estimated FTE]`	`2.6%` `[Observed internal P&L]`	Labor-heavy baseline.
2024	`$77,198/FTE` `[Observed internal P&L / Estimated FTE]`	`14.2%` `[Observed internal P&L]`	AI/systems integration and simplification start showing up.
2025	`$90,024/FTE` `[Observed internal P&L / Estimated FTE]`	`12.9%` `[Observed internal P&L]`	Efficiency holds with healthy profitability.
2026 Q1	`$120,094/FTE` `[Observed internal P&L / Estimated FTE]`	`17.1%` `[Observed internal P&L]`	Trajectory continues.

This supports the role-specific claim: higher revenue per paid-team FTE and better profitability moved together. It should be framed as sensible simplification after overstaffing plus systems/automation, not artificial shrinkage.

Submission Use

Recommended phrasing:

> On a QuickBooks P&L basis, with FTE estimated from labor spend, Heaviside moved from `$55.6K` revenue/FTE and `2.6%` net margin in 2023 to `$77.2K` and `14.2%` in 2024, `$90.0K` and `12.9%` in 2025, and `$120.1K` and `17.1%` in 2026 Q1 `[Observed internal P&L / Estimated FTE]`. That is not Single Grain's target yet. It is proof that I understand the metric and can move it while business health improves.

Caveats

- Do not attach raw QuickBooks exports externally without redaction.
- FTE is estimated from labor spend, not a perfect person-by-person historical roster.
- 2026 Q2TD exists internally but should not be overused because partial-quarter timing is lumpy.
- This does not claim Heaviside is already at Single Grain's `$300K-$400K` revenue/employee target.
