General Manager and Founder-Operator

Founder-operator with 10+ years building and running agency businesses. Started Heaviside as consulting work and built it into agency brands, software systems, and AI-assisted workflows. Hands-on in software, AI, paid media, SEO, analytics, and reporting. Current focus: higher revenue per employee, cleaner decisions, less founder drag, and AI work that turns into accepted work.

Experience

Heaviside Group - Founder and Operator

2011-present

- Founded and continue to own Heaviside Group.
- Built Heaviside from consulting work into a portfolio of agency brands, vertical offers, software systems, and AI-enabled workflows under one operating company.
- Built operating systems and internal tools across sales audits, SEO delivery, paid media review, reporting, queues, client and workflow memory, and scheduled-agent operations.
- Improved Heaviside revenue per FTE from about \$55.6K in 2023 to about \$120.1K in 2026 Q1. Net margin moved from 2.6% to 17.1% using internal P&L plus estimated FTE modeling.
- Reduced day-to-day founder management load to less than 5 hours a week through competent operators, ownership, queues, and exception handling.
- Expanded paid-media testing from a concentrated single-winner pattern into a larger AI-assisted creative testing loop with agent monitoring and human keep-or-kill review.

PASCO Scientific - Sales, SEO, Digital Marketing, and Machine Learning

2015-present

- Hired as Outside Sales Representative and Business Development Manager for a five-state territory.
- In 2020/2021, proposed a Head of SEO and Digital Marketing role to the board and leadership team. The role was created, and I was promoted into it.
- Led SEO, digital marketing, analytics, and search-driven demand work for a science education company.
- In 2025, added AI and Machine Learning Engineer responsibilities.
- Built an internal sales forecasting and sales-management ML model and application.

B2B Sales and Enterprise Accounts - Sales and Account Management

2006-2015

- Carried quota and managed enterprise-account sales work before moving fully into agency, marketing, and software systems.
- Accounts included T-Mobile, Sprint, Verizon, Time Warner Cable, and related telecom companies.
- Built pipeline, worked accounts through multi-touch follow-up, and learned the sales constraints that later shaped Heaviside's sales and delivery systems.
- Developed the operator bias that still governs the work: a system is only useful if sales, service, or leadership can act on it.

University of Iowa - Graduate Researcher, Plasma Physics

2002-2005

- Pursued PhD-track work in computational plasma physics; left ABD.
 - Wrote particle-in-cell plasma simulations in FORTRAN and worked in a laser spectroscopy lab.
 - Built the quantitative and systems habits that later carried into software, forecasting, analytics, and AI workflow design.
-

Selected Systems

- **HG Market Report:** sales-audit workflow that captures prospect context, runs local SEO checks, builds the analysis, publishes the report URL, and sends the report-ready email.
- **HG SEO Commander:** one delivery surface for GA4, Search Console, GBP, rankings, geogrids, citations, articles, approvals, queues, syncs, and admin tools.
- **Meta ads operating loop:** AI-generated creative variants, agent monitoring, human keep-or-kill review, and booked call gates.

- **Scheduled-agent fleet:** internal automation layer with 80+ jobs across research, content, inbox, infrastructure, and cold email.
 - **Obsidian operating vault:** source capture, decisions, lessons, project state, and reusable expertise.
-

Education

- **University of Iowa:** PhD program in plasma physics; ABD.
 - **Marquette University:** Physics; published undergraduate research on crystal growth kinetics indexed on Google Scholar.
-

Operating Profile

INTP, likely 6w5 with strong Type 1 overlay; Kolbe 9-4-3-2. Practical read: source-checking, preparation, standards, error correction, and follow-through support for high-Quick-Start founders.
