

Appendix / Supporting Artifacts

Not part of the written-answer page count.

The official written answer is the first 2 pages of this packet.

The following pages are image-rendered supporting artifacts: operating artifact, evidence log, source labels, AI disclosure, candidate profile, proof summaries, application support, and internal QA.

The challenge brief says diagrams and decision trees do not count toward the limit. The public scoring guide says artifact links, code, sheets, and short demos do not count toward the written page limit unless the brief says otherwise.

If the application portal counts every PDF page mechanically, submit the 2-page official PDF and attach or link supporting artifacts separately.
