

Ops COO 009 - Supporting Artifact

Backup artifact: <https://csloane.com/single-grain>

The 2-page PDF is the actual answer. This short file points to the live, unlisted backup page.

What the backup page shows

- First 48 hours: Shaun, source access, revenue triage, role boundaries, and Eric's decision block.
 - Risk gate: green, yellow, and red routing with mistake handling.
 - Cron audit: question, delete, simplify, accelerate, automate last.
 - Role math: current agency scale, TES gap, and revenue/FTE path.
 - Evidence map: source type, proof tier, and private-record boundaries.
 - Meta ads proof: about 15x more live ad testing and booked-call cost from about \$770 to about \$165.
 - Operating proof: Heaviside rhythm around source data, queues, owners, review, send/publish decisions, and outcome logging.
 - Execution control: the right path is easier than manual cleanup; delegated ownership, exception review, and written memory keep work moving.
 - Human boundary and AI disclosure.
-

Why this file exists

The brief asks for an operating artifact, evidence log, number labels, AI disclosure, failure modes, and what stays human. The PDF keeps the answer clean. The backup page gives them something to inspect without turning the submission into a long appendix.

The page shows the source map, first-48 inputs, risk gate, Elon Algorithm cron decisions, role math, financial graph, Meta ads proof, and evidence map.

Evidence boundaries

- Challenge facts are observed from the public brief.
- Company performance claims are from internal records.
- Time savings are estimates from replaced manual work.
- Scheduled-agent claims are backed by logs and job manifests.
- Meta ads claims are from internal Meta/CRM reports, creative launch logs, and change logs.
- Self-assessment is included for transparency, not treated as clinical evidence.

Raw QuickBooks exports, payroll records, client screenshots, Slack logs, CRM exports, and account-level data are not attached to the application. I can walk through them live if requested.
